Summary

Backend Engineer with 6+ years of experience building scalable, event-driven systems in Python and Go on AWS. Strong track record in AI-powered document automation, async data pipelines, and cloud infrastructure (AWS, GCP, Terraform). Delivers end-to-end — from backend APIs and distributed systems to frontend integrations — with a focus on automating high-volume manual workflows and driving measurable business impact.

Professional Experience

Lighthouz AI Inc. (YC S24, Remote)

Dec, 2024 – Feb, 2026

Senior Full Stack Engineer

San Francisco, California

- Architected an asynchronous document engine using AWS Step Functions (State Machines) and SQS, processing over 500k invoices within the first few months of operation.
- Developed a Classify-Extract-Audit pipeline using AWS Textract and GPT-4o/4.1 to automate data extraction and logic-based auditing for unstructured carrier documents.
- Built the company's React web application and a matching Outlook Add-in, enabling users to execute the full product feature set directly from their inbox.
- Integrated core workflows with legacy TMS/FMS systems (Factorsoft, WinFactor, Tai, 3PL) by developing custom ETL adapters to normalize data between disparate APIs.
- Reduced the delivery-to-payment cycle for brokers by 24+ hours and enabled same-day payment for factoring firms by automating manual document verification.

Savor Operations - Formerly Dashy Dash (Remote)

Oct, 2022 – Aug, 2024

Lead Backend Engineer

San Francisco, California

- Reduced invoice processing time from days to minutes by developing scalable pipelines and user-friendly Retool applications, reducing processing time by 99.83%.
- Optimized deployment across multiple AWS accounts by managing cloud infrastructure with Terraform, including Django on ElasticBeanstalk, Lambda functions, Glue Jobs, and AWS OpenSearch.
- Streamlined CI/CD using GitHub Actions, reclaiming 20+ engineering hours per month across a 5-person team and enabling near-instant rollbacks through Terraform-managed infrastructure versioning.
- Extended the core invoice pipeline with third-party integrations (EDI, ClickUp, Zaru, Impira) and OpenAI-powered automation, enabling end-to-end workflow coverage across the billing lifecycle.

Cilans Systems Pvt. Ltd. (On-Site)

Oct, 2020 – Sep, 2022

Senior Software Engineer

Ahmedabad, Gujarat

- Engineered backend solutions across 6+ client projects, adapting architecture and delivery to each client's domain and technical requirements.
- Led migration from monolith to microservices for Costa Coffee's Storefront Microservices using NestJS, TypeScript, KafkaJS, and GraphQL.

CSE, IIT Bombay (On-Site)

Jan, 2020 – Jul, 2020

Deep Learning Research Intern

Mumbai, Maharashtra

- Engineered an OCR-based document parsing pipeline to automate text extraction from identity documents, enabling end-to-end E-KYC verification without manual data entry.
- Developed and benchmarked deep learning classifiers for multi-class document type detection, conducting module-wise evaluation to iteratively improve model accuracy.

Projects

- Developed Merge-PDF – a CLI tool in Python using PyMuPDF, for merging PDFs, Epubs, and images with customizations, achieving 21K+ downloads.

Technical Skills

Languages: Python, Go, JavaScript.

Frameworks: FastAPI, DRF, NestJS, React.

Infrastructure: AWS, Terraform, GitHub Actions.

Data/AI: PostgreSQL, MongoDB, Kafka, OpenAI & Claude APIs, AWS Textract.

Education

B.Tech in Information and Communication Technology

Aug, 2016 – Jun, 2020

School of Engineering and Applied Science, Ahmedabad University

Ahmedabad, Gujarat
